

## Dalmec S.p.A.

Cles (TN), Italy

### About the Company

A global leader in the engineering and manufacture of industrial manipulators, Dalmec has installed more than 50,000 products worldwide in some of the best known companies over five continents. Reducing the 'weight' of working was the winning idea that made the company one of the flagships of Trento and Italian industry.

### Problem...

Having to store a wide range of spare parts and manufacturing components, including pre-assembled manipulator blocks, kits and units, some of which are very large, Dalmec above all needed to make the structure of its warehouse safer and more ergonomic for the recovery and management of goods by operators. It was also very important to be able to track the operations.

### Solution!

With the installation of 18 Modula vertical warehouses, Dalmec was able to optimise the available space, reducing shelving and avoiding potentially dangerous situations for its operators. What's more, the use of WMS software has enabled the company to manage 12,000 item codes with more speed and greater traceability.

#### MODULA FEATURES

- Trays:** 405
- Model:** MX1000 - MC75 - Modula 06 - Series S, L and F
- Capacity:** 990 kg - 750 kg
- Height:** 5,900 mm – 7,700 mm
- Number:** 18 machines
- Application:** storage of spare parts and manufacturing components
- Software:** WMS Standard
- Options available:** Weight distribution plates, Sliding console, LED bar
- Interfaced management system:** custom-made software
