

GORDON FOOD SERVICE CALGARY

Gordon Food Service Calgary, has been providing customers excellence, expertise, and quality products as a family-operated broad-line food distribution company since 1897.

With automated sorting and selection systems first introduced in 1980, the business has seen significant value over time in adopting new technology and their passionate commitment to their customers continues to drive them towards innovation.

THE CHALLENGE

Accelerating customer demands have created a need for companies to upgrade storage capacity and improve their picking processes. Gordon Food Service Calgary was looking for an upgrade to its fulfillment operations, specifically adding an automated storage and retrieval system (ASRS), that would allow the company to operate new technology in tandem with their legacy picking processes to increase overall efficiency.

THE SOLUTION

Gordon Food Service Calgary chose Attabotics as its strategic partner in upgrading their legacy storage and fulfillment operations to allow for more capacity and throughput without leaving their current warehouse space. Attabotics was able to integrate their 3D robotic solution directly with Gordon Food Service Calgary's current manual picking operations to significantly increase throughput of order fulfillment, while facing minimal downtime.

THE RESULT

Today, Attabotics and Gordon Food Service Calgary are happy to celebrate a partnership that has continued since 2018. Gordon Food Service Calgary and Attabotics have worked together to continuously improve the system, resulting in a 2X efficiency increase of throughput within the Attabotics system. This partnership has provided a valuable element of stability and has allowed the Gordon Food Service Calgary organization to become more efficient within the system when compared to the previous manual picking process, particularly during times of peak demand.
